HOW TO APPLY:

To apply for consideration for the following career opportunity for people with disabilities, please visit www.benderconsult.com/careers/submit-resume and complete the electronic form.

POSITION DESCRIPTION:

- Monitor events for all centers to identify security issues or respond to automated event identification.
- Develop, execute and maintain security system fault management support procedures for assigned systems, as well as large ISP networks and systems.
- Investigate opportunities to update security system capabilities or perform policy updates based upon system performance reports and observed incidents or threats.
- Perform configuration updates, such as modifying configurations, signature definitions or implementing new policies on various security tools, as directed.
- Assist with daily operating system (OS) and application-level administration for assigned security elements.
- Respond to security incidents and report on incident handling and resolution.
- Leverage other network management tools used by national or local management centers to identify and respond to security incidents and faults.
- Proactively identify and report security gaps and vulnerabilities to the critical business information, systems and network infrastructure.
- Assist with daily virus, vulnerability and exploit assessment review.
- Assist with security compliance audits to verify completeness of security required configurations and verify system hardening.
- Participate in the post-mortem investigation of catastrophic network security incidents and prepare security incident reports documenting the findings.

QUALIFICATIONS:

- Bachelor's degree or equivalent years of experience in network security, Computer Science, MIS, or related field required.
- Familiarity with trouble ticketing procedures required.
- Certifications in Red Hat (RHCE), Systems Security (SSCP), and global information assurance (GIAC) desired.
- Knowledge or experience with network based security mitigation systems or tools.
- Proven analytical and problem solving ability.
- Strong written and verbal communication skills.
- Experience with incident response procedures.
- Experience with TCP/IP and UDP/IP protocols and networking.
- Experience administering Unix or Linux-based applications, particularly in secure environments.
- Ability to interface with other internal or external organizations regarding failure and incident response situations.
