POSITION DESCRIPTION:

- Analyze customer and system requirements and evaluate alternative approaches.
- Design and develop solutions tailored to specific agency, systems, and customer requirements.
- Lead testing and integration of new and modified solutions into the system.
- Review and provide guidance on software developed by vendors.
- Test software developed both internally and by vendors, and quickly respond to urgent situations to develop and deliver unique solutions to customer problems.
- Plan and design systems architecture, and write and maintain software program documentation.
- Investigate and evaluate new software technologies; ensure the rigorous application of information security/information assurance policies, principles, and practices to the delivery of application software services.

QUALIFICATIONS:

- Bachelor's degree in computer science, engineering, information technology, or a related field preferred; equivalent experience and education considered.
- Experience with designing, architecting, and implementing solutions in Amazon Web Services (AWS) using EC2, S3, and Lambda.
- Knowledge of development principles, methods, and tools for designing, developing, coding, testing, and deploying software.
- Experience working in an Agile environment.
- Ability to work with cloud engineering design principles, system design and engineering principles, methods, and tools for integrating components such as network equipment, protocols, and telephony, into a functional system or prototype.
- Demonstrated knowledge of computer and network security concepts, principles, theories, and methods for designing, developing, analyzing, testing, and securing of computer networks.
